

Case Study

Rosary School, Jordan

Independent, project-based qualifications empower students

The most significant challenge currently facing educators is mitigating the impact of lost learning due to the pandemic. Rosary School in Jordan used the OxfordAQA Independent Project Qualification (IPQ) to help students transition back into full-time study.

Faten Mouasher, IPQ Supervisor at Rosary School, has been delighted with the positive impact.

Skills honed thanks to the IPQ have enabled students to thrive on their return to the classroom. Extensive research has demonstrated that students taking an extended project qualification are more likely to be successful in their other A-levels, and this was certainly the case for Rosary School. Students on the initial IPQ programme exceeded their expected A-level results, including three who are now studying medicine.

“

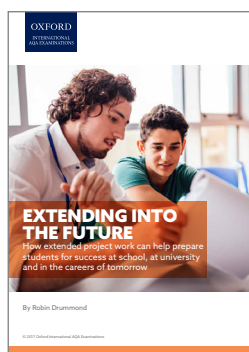

Students have gained skills such as time management, problem solving, public speaking, interpersonal skills, primary research and computer skills, which are all highly beneficial.”

Faten Mouasher,
IPQ Supervisor

Extending into the future

Student voice

The students themselves are very clear that the IPQ was a significant factor in their success, with one saying how instrumental it was in preparing her for medical school. Other students talk about the skills and confidence they acquired.

“I gained the skill of managing my time more efficiently”, says one student, “setting proper amounts of time for each task that I must complete.” Another commented on how their “problem solving skills greatly improved...I could face any issue that might come up. ”

The school currently offers students OxfordAQA International GCSE Science and Geography and will expand into offering International AS and A-level for the next exam series.

Staff at Rosary School have been so impressed by the impact of IPQ that the school has now rolled out IPQ as a mandatory AS subject for all students.

“

Throughout my IPQ project, I learned about neurology... I gained knowledge which helped my decision to pursue medicine at university. ”
