(9660/MA04) Unit S2 - Statistics

Specimen 2018

Morning

Time allowed: 1 hour 30 minutes

### Materials

- For this paper you must have the booklet of formulae and statistical tables.
- You may use a graphics calculator.

### Instructions

- Use black ink or black ball-point pen. Pencil should only be used for drawing.
- Fill in the boxes at the top of this page.
- Answer all questions.
- You must answer each question in the space provided for that question. If you require extra space, use a supplementary answer book; do **not** use the space provided for a different question.
- Do not write outside the box or around each page.
- Show all necessary working; otherwise marks for method may be lost.
- Do all rough work in this book. Cross through any work that you do not want to be marked.

#### Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 80.

### Advice

- Unless stated otherwise, you may quote formulae, without proof, from the booklet.
- You do not necessarily need to use all the space provided.

	Answer <b>all</b> questions in the spaces provided.	
1	The mean age of people attending a large concert is claimed to be 35 years. A random sample of 100 people attending the concert was taken and the mea was found to be 37.9 years.	n age
1 (a)	Given that the standard deviation of the ages of the people attending the conc is 12 years, test, at the 1% level of significance, the claim that the mean age is 35 years.	ert
		[7 marks]
1 (b)	Explain, in context, the meaning of a Type II error.	[2 marks]

2	The continuous random variable $T$ has probability density function $f(t)$ where	
2	The continuous random variable $T$ has probability density function $f(t)$ , where	
	$f(t) = \begin{cases} 5e^{-5t} & t \ge 0\\ 0 & \text{otherwise} \end{cases}$	
2 (a)	Derive the cumulative distribution function of $T$ .	
		[4 marks]
2 (b)	Find the value of the constant <i>c</i> such that $P(T > c) = 0.05$	
2 (b)	Find the value of the constant $c$ such that $P(T > c) = 0.05$	[2 marks]
2 (b)	Find the value of the constant $c$ such that $P(T > c) = 0.05$	[2 marks]
2 (b)	Find the value of the constant $c$ such that $P(T > c) = 0.05$	[2 marks]
2 (b)	Find the value of the constant $c$ such that $P(T > c) = 0.05$	[2 marks]
2 (b)		[2 marks]
2 (b)	Find the value of the constant $c$ such that $P(T > c) = 0.05$	[2 marks]
2 (b)		[2 marks]

3	The weight, $Y$ kilograms, of cement in a bag can be modelled by a normal rando variable with mean 25.25 and standard deviation 0.35	m
	A firm purchases 10 such bags. These bags may be considered to be a random sample.	
3 (a)	Determine the probability that the mean weight of cement in the 10 bags is less than 25 kg.	
	[	4 marks]
	Answer	
3 (b)	Calculate the probability that the weight of cement in each of the 10 bags is	
	more than 25 kg.	[4 marks]
	Answer	

4	Jack, a geologist, is studying pebbles on a beach. He uses a frame, called to enclose an area of the beach. He then counts the number of quartz peb within the quadrat. He repeats this procedure 40 times, obtaining the follow summarised data:	bles, X,				
	$\sum x = 128$ and $\sum (x - \overline{x})^2 = 126.4$					
	Jack believes that the distribution of <i>X</i> can be modelled by a Poisson distribution $\lambda = 3.2$	bution with				
4 (a)	Use the summarised data to support Jack's belief.					
4 (b) 4 (b) (i)						
	Using Jack's model, calculate the probability that a single placing of the quadrat contains more than 5 quartz pebbles	[2 marks]				

5

ſ

4 (b) (ii)	a single placing of the quadrat contains at least 3 quartz pebbles but fewer than 8 quartz pebbles	
	[3 ma	rks]
	Answer	
4 (b) (iii)	when the quadrat is placed <b>twice</b> , both placings contain at most 5 quartz pebbles. [2 ma	rks]
	Answer	
	Answer	

Г

4 (c)	Jack models the number of <b>flint</b> pebbles enclosed by the quadrat by a Poisson distribution with mean 5. He assumes that the number of flint pebbles enclosed quadrat is independent of the number of quartz pebbles enclosed by the quadrat							
	Using Jack's models, calculate the probability that a single placing of the quadra contains a <b>total</b> of either 9 or 10 pebbles which are quartz or flint.							
	Answer	-						

5 It is claimed that the proportion, p, of people who prefer cooked fresh sweetcorn to cooked frozen sweetcorn is greater than 0.50 In an attempt to test this claim, a sample of 50 people were each given an unlabelled portion of cooked fresh sweetcorn and an unlabelled portion of cooked frozen sweetcorn to taste. After tasting each portion, each person was asked to state which of the two portions they preferred. Of the 50 people sampled, 29 preferred the cooked fresh sweetcorn. Assuming that the 50 people may be considered to constitute a random sample, use a binomial distribution and the 10% level of significance to investigate the claim. [6 marks]

6	The volume of shampoo, $V$ millilitres, delivered by a machine into bottles may b modelled by a normal random variable with mean $\mu$ and standard deviation $\sigma$ .	е
6 (a)	Given that $\mu = 412$ and $\sigma = 8$ , determine	
6 (a) (i)	P(V < 400)	[3 marks]
	Answer	
6 (a) (ii)	P( <i>V</i> > 420)	[2 marks]
6 (a) (iii	) P(V = 410).	[1 mark]
	Answer	-

	so that	P(V<400) = 0.05	and	P(V>420) = 0.01	
6 (b) (i)	Show, with t	he aid of a suitable ske			
		$400 - \mu = -1.6449\sigma$	and	420 – $\mu$ = 2.3263 $\sigma$	[3 marks

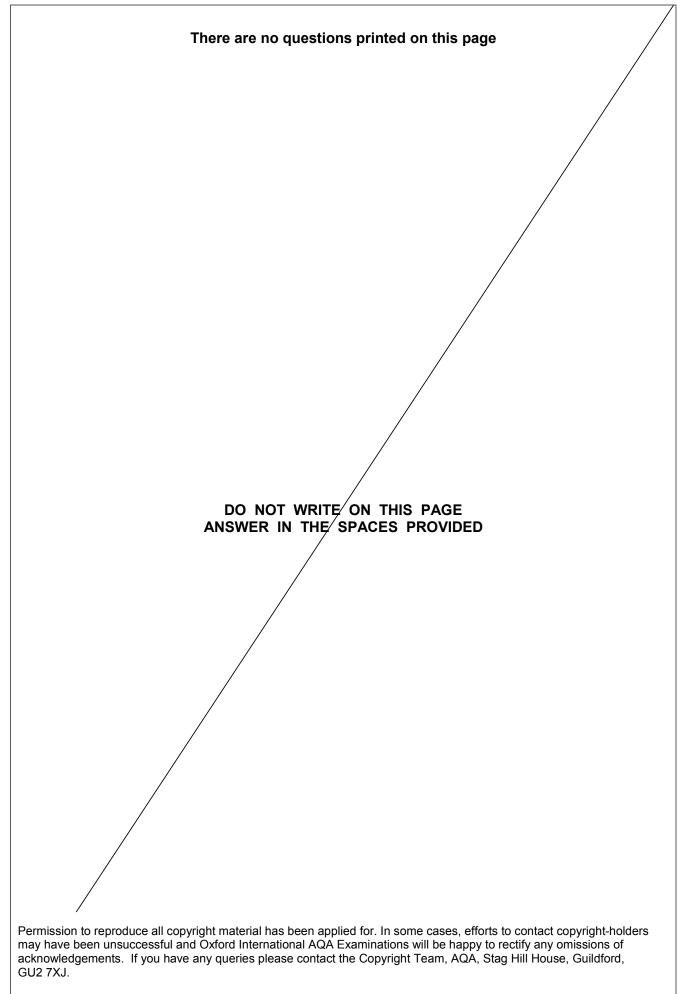

6 (b) (ii) Hence calculate values for  $\mu$  and  $\sigma.$ [3 marks] μ = \_\_\_\_\_ σ = \_\_\_\_\_

7	The time, in weeks, that a patient must wait to be given an appointment at Holmsoon Hospital may be modelled by a random variable <i>T</i> having the cumulative distribution function $F(t) = \begin{cases} 0 & t \le 0\\ \frac{t^3}{216} & 0 \le t \le 6\\ 1 & t \ge 6 \end{cases}$
7 (a)	Find, to the nearest day, the time within which 90 per cent of patients will have been given an appointment. [3 marks
	Answer
7 (b)	Find the probability density function of $T$ for all values of $t$ . [3 marks

7 (c)	Calculate the mean and the variance of <i>T</i> . [6 marks]
	mean =
	variance =
7 (d)	Calculate the probability that the time that a patient must wait to be given an appointment
	is more than one standard deviation above the mean. [4 marks]
	Answer

5	The contents	in millil	litres of	cartons	s of milk	produc	ed at K	ream D	airies ca	n he	
	modelled by					-					
	After receivin content of the decided to in	carton	s had be	laints fro een redu	om theii uced, th	r custon e produ	ners wh Iction m	o thoug anager	ht that th of Krean	e average n Dairies	
	A random sar in millilitres.	mple of	8 cartor	ns of mil	k was ta	aken, re	evealing	the foll	owing co	ntents,	
		560	568	561	562	564	567	565	563		
	Investigate, a of milk is less				cance, v	whether	the ave	erage c	ontent of	cartons	
										[10 mark	s]
