## OXFORD

# INTERNATIONAL GCSE COMBINED SCIENCE DOUBLE AWARD 

## 9204/CE CHEMISTRY - PAPER 2 - EXTENSION PAPER

## Specimen Material

1 hour 45 minutes

## Materials

For this paper you must have:

- a ruler with millimetre measurements
- a calculator
- the Periodic table (enclosed).

## Instructions

- Use black ink or black ball-point pen.
- Fill in the boxes at the bottom of this page.
- Answer all questions.

## Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 100.

Please write clearly, in block capitals, to allow character computer recognition.
Centre number $\square$ Candidate number $\square$
Surname $\square$
Forename(s) $\square$

Candidate signature $\qquad$

Answer all questions in the spaces provided.

1 Some students did an experiment to find the temperature change when hydrochloric acid reacts with sodium hydrogencarbonate.

The results are in the table.

| Number of spatula <br> measures of sodium <br> hydrogencarbonate | Start <br> temperature in <br> ${ }^{\circ} \mathbf{C}$ | Final <br> temperature in <br> ${ }^{\circ} \mathrm{C}$ | Change in <br> temperature in <br> ${ }^{\circ} \mathrm{C}$ |
| :---: | :---: | :---: | :---: |
| $\mathbf{2}$ | 20 | 16 | 4 |
| $\mathbf{4}$ | 20 | 14 | 6 |
| $\mathbf{6}$ | 19 | 11 | 8 |
| $\mathbf{8}$ | 20 | 10 | 10 |
| $\mathbf{1 0}$ | 19 | 9 | 10 |
| $\mathbf{1 2}$ | 20 | 10 | 10 |

| $\mathbf{0}$ | $\mathbf{1}$ | $\mathbf{1}$ Describe the trends shown in the students' results. |

$\qquad$
$\qquad$
$\qquad$

| $\mathbf{0}$ | $\mathbf{1}$ | $\mathbf{2}$ | State one variable that must be kept the same for the investigation. |
| :--- | :--- | :--- | :--- |

$\qquad$
$\qquad$

| $\mathbf{0}$ | $\mathbf{1}$ | $\mathbf{3}$ State the type of energy transfer for this reaction. |
| :--- | :--- | :--- | :--- |

Sodium hydrogencarbonate is used as baking powder for making cakes.

When the cake mixture is baked the sodium hydrogencarbonate decomposes.
The equation for the reaction is:

$$
2 \mathrm{NaHCO}_{3}(\mathrm{~s}) \xrightarrow{\text { Heat }} \mathrm{Na}_{2} \mathrm{CO}_{3}(\mathrm{~s})+\mathrm{H}_{2} \mathrm{O}(\mathrm{~g})+\mathrm{CO}_{2}(\mathrm{~g})
$$

| $\mathbf{0}$ | $\mathbf{1}$ | $\mathbf{4}$ The cake mixture rises when baked. |
| :--- | :--- | :--- |

Use the equation to suggest why.

Question 1 continues on the next page

| $\mathbf{0}$ | $\mathbf{1}$ | $\mathbf{5}$ The same reaction can be reversed to produce sodium hydrogencarbonate from |
| :--- | :--- | :--- | :--- | sodium carbonate.

$$
\mathrm{Na}_{2} \mathrm{CO}_{3}+\mathrm{H}_{2} \mathrm{O}+\mathrm{CO}_{2} \longrightarrow 2 \mathrm{NaHCO}_{3}
$$

Do the reactants need to be heated?
Give a reason for your answer.

$\qquad$
$\qquad$
Percentage of carbon $=$ \%

2 The label is from a packet of Low Sodium Salt.

A student tested some Low Sodium Salt to show that it contains carbonate ions and chloride ions.

| $\mathbf{0}$ | $\mathbf{2} \cdot$ | $\mathbf{1}$ Describe how you would test for carbonate ions. |
| :--- | :--- | :--- | :--- |

Describe what you would see.
$\qquad$
$\qquad$
$\qquad$
$\qquad$

Suggest why it is difficult to identify both of these ions in Low Sodium Salt using a flame test.
[1 mark]
$\qquad$
$\qquad$

Read the following information and then answer the questions.

## Salt - friend or foe?

Sodium chloride (salt) is an essential mineral for our health. It is used to flavour and preserve foods.

Too much sodium in our diet may increase the risk of high blood pressure and heart disease.

Heart disease is a major cause of death in many countries. Some people also claim that too much sodium is poisonous and can cause cancer, while others say that more evidence is needed.

Many processed foods contain salt, so it is easy to exceed the recommended daily upper limit of about 5 g of salt per person. A 'healthier' amount should be about 3 g . Many people consume over 10 g of salt each day.

One way to reduce sodium in our diet is to use Low Sodium Salt. This has two thirds of the sodium chloride replaced by potassium chloride.

| 0 | $\mathbf{2}$ | $\mathbf{3}$ Suggest why removing all sodium chloride from food would be impractical. |
| :--- | :--- | :--- | :--- |

4 A student investigated displacement reactions of metals.
The student measured the temperature change when different metals react with copper sulfate solution.

He used the following method:

- put $50 \mathrm{~cm}^{3}$ of copper sulfate solution into a polystyrene cup
- measure the temperature of the solution
- calculate the mass of 0.050 mol of the metal
- add this mass of metal to the solution and stir the mixture
- measure the temperature of the mixture after one minute

| $\mathbf{0}$ | $\mathbf{4}$ | $\mathbf{1}$ Name a suitable piece of apparatus the student could use to measure $50 \mathrm{~cm}^{3}$ of |
| :--- | :--- | :--- | :--- | copper sulfate solution.

$\qquad$

| $\mathbf{0}$ | $\mathbf{4}$ | $\mathbf{2}$ Calculate the mass of 0.050 mol of zinc. |
| :--- | :--- | :--- |

Relative atomic mass $\left(A_{\mathrm{r}}\right): \mathrm{Zn}=65$
$\qquad$
$\qquad$
Mass = $\qquad$ g

$\qquad$
$\qquad$

## Figure 3

## Temperature at start

Temperature after one minute

Write down the temperature at the start and after one minute.
$\qquad$
Temperature at the start = ${ }^{\circ} \mathrm{C}$

Temperature after one minute $=$ ${ }^{\circ} \mathrm{C}$

$\qquad$

The student did the experiment three times for each metal.
Table 2 shows the student's results.
Table 2

| Metal | Temperature increase in $^{\circ} \mathrm{C}$ |  |  |  |
| :--- | :---: | :---: | :---: | :---: |
|  | Experiment 1 | Experiment 2 | Experiment 3 | Mean |
| Zinc | 10 | 24 | 28 |  |
| Iron | 19 | 17 | 18 | 18 |
| Magnesium | 61 | 63 | 59 |  |

| 0 | $\mathbf{4}$ | 6 | Calculate the mean temperature increase for zinc and for magnesium. |
| :--- | :--- | :--- | :--- |

You should take account of any anomalous results

Zinc
$\qquad$
Mean temperature increase $=$ $\qquad$ ${ }^{\circ} \mathrm{C}$

Magnesium
$\qquad$
Mean temperature increase $=$ $\qquad$ ${ }^{\circ} \mathrm{C}$

| 0 | $\mathbf{4}$ | $\mathbf{7}$ | Which metal has the most precise results? |
| :--- | :--- | :--- | :--- |

Give a reason for your answer.

Metal
Reason

| $\mathbf{0}$ | $\mathbf{4}$ | $\mathbf{8}$ Use the results in Table 2 to put the metals copper, iron, magnesium and zinc in |
| :--- | :--- | :--- | :--- | order of their reactivity.

Explain how you worked out the order of reactivity.

Most reactive $\qquad$
$\qquad$
$\qquad$
Least reactive $\qquad$
Explanation

The variables he controlled were the volume of copper sulfate solution, the number of moles of metal and the time when the temperature was measured.

The metal was in excess.
Suggest one other control variable.
Explain how the temperature change would be affected if this variable was not controlled.

Control variable
Explanation

5 This question is about rates of reaction.
Dilute hydrochloric acid reacts with sodium thiosulfate solution.
$2 \mathrm{HCl}+\mathrm{Na}_{2} \mathrm{~S}_{2} \mathrm{O}_{3} \longrightarrow 2 \mathrm{NaCl}+\mathrm{S}+\mathrm{SO}_{2}+\mathrm{H}_{2} \mathrm{O}$

| $\mathbf{0}$ | $\mathbf{5}$ | $\mathbf{1}$ The reaction produces a precipitate. |
| :--- | :--- | :--- |

What is the name of the precipitate?
Tick one box.

A student investigated how the rate of a reaction changes with temperature.
The student used the following method:

- put $50 \mathrm{~cm}^{3}$ of sodium thiosulfate solution into a conical flask
- heat the sodium thiosulfate solution to the required reaction temperature
- put the flask on a cross drawn on a piece of paper
- add $10 \mathrm{~cm}^{3}$ of dilute hydrochloric acid and start a stopclock
- stop the stopclock when the cross can no longer be seen.

| $\mathbf{0}$ | $\mathbf{5}$ | $\mathbf{2}$ Why can the student no longer see the cross? |
| :--- | :--- | :--- | :--- |

| $\mathbf{0}$ | $\mathbf{5}$ | . | $\mathbf{3}$ |
| :--- | :--- | :--- | :--- | The student's results are shown in Table 3.

## Table 3

| Temperature in ${ }^{\circ} \mathrm{C}$ | Time in seconds |
| :---: | :---: |
| 20 | 155 |
| 30 | 78 |
| 40 | 65 |
| 50 | 19 |
| 60 | 10 |

## Plot the results on the grid in Figure 4, choosing appropriate scales.

 Draw a best-fit smooth curve.Figure 4

7 A portable stove uses propane gas.

A student did an experiment to find the energy released when propane is burned.

The student:

- put 750 g water into a beaker
- measured the temperature of the water, which was $17^{\circ} \mathrm{C}$
- heated the water by burning propane
- measured the temperature of the water again, which was then $64^{\circ} \mathrm{C}$.

The student calculated the energy released using the equation.

$$
Q=m \times 4.2 \times \Delta T
$$

Where:
$\mathrm{Q}=$ energy released $(\mathrm{J})$
$\mathrm{m}=$ mass of water ( g )
$\Delta \mathrm{T}=$ temperature change $\left({ }^{\circ} \mathrm{C}\right)$

| $\mathbf{0}$ | $\mathbf{7}$ | . | $\mathbf{1}$ |
| :--- | :--- | :--- | :--- | Use the student's results to calculate the energy released in joules (J).

$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

| $\mathbf{0}$ | $\mathbf{7}$ | $\mathbf{2}$ To find how much propane had been used the student weighed the portable stove |
| :--- | :--- | :--- | :--- | :--- | before and after the experiment.

The mass of the camping stove decreased by 6.0 g .
Using this information and your answer to part 07.1, calculate the energy in kJ released when 1 mole of propane burns.

Relative formula mass $\left(M_{r}\right)$ of propane $=44$
$\qquad$
$\qquad$
$\qquad$
Energy released = $\qquad$ kJ

| 0 | 7 | 3 | The student's method does not give accurate results. |
| :--- | :--- | :--- | :--- |

However, this method is suitable for comparing the energy released by different fuels.

Suggest why.
$\qquad$
$\qquad$

The student used bond energies to calculate the energy released when propane is burned.

The equation for the combustion of propane is:

$$
\mathrm{C}_{3} \mathrm{H}_{8}+5 \mathrm{O}_{2} \longrightarrow 3 \mathrm{CO}_{2}+4 \mathrm{H}_{2} \mathrm{O}
$$

Some bond energies are given in Table 4.
Table 4

| Bond | Bond energy <br> in kJ per mole |
| :---: | :---: |
| $\mathrm{C}=\mathrm{O}$ | 803 |
| $\mathrm{O}-\mathrm{H}$ | 464 |

The displayed structures of the products are:

$$
\text { carbon dioxide } \quad \mathrm{O}=\mathrm{C}=\mathrm{O}
$$

water

| 0 | 7 | $\mathbf{4}$ Calculate the energy released by bond making when the products are formed. |
| :--- | :--- | :--- | :--- |

[3 marks]
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
Energy released = $\qquad$ kJ per mole

| $\mathbf{0}$ | $\mathbf{7} .5$ | $\mathbf{5}$ The energy used for bond breaking of the reactants in the equation is 6481 kJ |
| :--- | :--- | :--- | per mole.

Calculate the overall energy change of this reaction.
$\qquad$
$\qquad$
Overall energy change $=$ $\qquad$ kJ per mole
