

INTERNATIONAL A-LEVEL **COMPUTER SCIENCE**

CS04

Unit 4 Advanced concepts and principles of computer science

Mark scheme

Specimen

Version: 1.0 Final

Mark schemes are prepared by the Lead Assessment Writer and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation events which all associates participate in and is the scheme which was used by them in this examination. The standardisation process ensures that the mark scheme covers the students' responses to questions and that every associate understands and applies it in the same correct way. As preparation for standardisation each associate analyses a number of students' scripts. Alternative answers not already covered by the mark scheme are discussed and legislated for. If, after the standardisation process, associates encounter unusual answers which have not been raised they are required to refer these to the Lead Examiner.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of students' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Further copies of this mark scheme are available from oxfordaqaexams.org.uk

Copyright information

How to mark

Aims

When you are marking your allocation of scripts your main aims should be to:

- recognise and identify the achievements of students
- where relevant, place students in the appropriate mark band and in the appropriate part of that mark band (high, low, middle) for **each** assessment objective
- record your judgements with brief notes, annotations and comments that are relevant to the mark scheme and make it clear to other associates how you have arrived at the numerical mark awarded for each assessment objective
- ensure comparability of assessment for all students, regardless of question or examiner.

Approach

It is important to be **open minded** and **positive** when marking scripts.

The specification recognises the variety of experiences and knowledge that students will have. It encourages them to study computer science in a way that is relevant to them. The questions have been designed to give them opportunities to discuss what they have found out about computer science. It is important to assess the quality of **what the student offers**.

Do not mark scripts based on the answer **you** would have written. The mark schemes have been composed to assess **quality of response** and not to identify expected items of knowledge.

Assessment Objectives

This component requires students to:

AO1: Demonstrate knowledge and understand of the key concepts and principles of computer science.

AO2: Apply knowledge and understanding of key concepts and principles of computer science.

AO3: Analyse problems in computational terms in order to develop and test programmed solutions and demonstrate an understanding of programming concepts.

The following annotation is used in the mark scheme.

; means a single mark

// means alternative response

/ means an alternative word or sub-phrase

A means acceptable creditworthy answer

R means reject answer as not creditworthy

NE means not enough

I means ignore

DPT in some questions a specific error made by a student, if repeated, could result in the student failing to achieve multiple marks. The **DPT** label indicates that this mistake should result in a student not achieving only one mark, on the first occasion that the error is made.

Provided that the answer remains understandable, subsequent marks should be awarded as if the error was not being repeated.

Question	Part	Marking guidance	Total marks
01	1	<p>Multiple bits transmitted simultaneously / at same time;</p> <p>NE. data, values etc for bits</p> <p>Each (simultaneously transmitted) bit is sent down a different wire / cable / path / line;</p> <p>A. multiple wires / cables / paths / lines used for transmission</p>	<p>2</p> <p>AO1 = 2</p>

Question	Part	Marking guidance	Total marks
01	2	<p>The hardware / wiring required for serial data transmission is cheaper;</p> <p>NE. cheaper without reference to hardware or wiring</p> <p>Serial transmission does not suffer from crosstalk // (two) bits cannot interfere with each other because they are not sent simultaneously;</p> <p>Serial transmission does not suffer from data skewing // bits transmitted are guaranteed to arrive in the order they were sent;</p> <p>NE. more reliable, lower probability of interference / corruption</p> <p>Serial transmission can be used over longer distances;</p> <p>Max 1</p>	<p>1</p> <p>AO1 = 1</p>

Question	Part	Marking guidance	Total marks
01	3	<p>B Latency is the rate at which signals on a wire or line can change;</p> <p>R. if more than one lozenge shaded</p>	<p>1</p> <p>AO1 = 1</p>

Question	Part	Marking guidance	Total marks
01	4	<p>Start the receiver clock ticking;</p> <p>A. to wake up the receiver</p> <p>Synchronise the clock in the receiver to the transmitter clock // bring the clock in the receiver into phase with the clock in the transmitter;</p> <p>A. to synchronise the receiver and transmitter clocks</p> <p>A. synchronise the clocks in the devices</p>	<p>1</p> <p>AO1 = 1</p>

		<p>NE. synchronise the (two) clocks</p> <p>R. indicates start of transmission</p> <p>Max 1</p>	
--	--	---	--

Question	Part	Marking guidance	Total marks
01	5	<p>Allows the (next) start bit to be recognised;</p> <p>Provides time for the receiver to process / transfer the received data;</p> <p>NE. indicates that the received data can be processed</p> <p>R. indicates end of transmission</p> <p>R. indicates clocks no longer need to be synchronised</p> <p>Max 1</p>	<p>1</p> <p>AO1 = 1</p>

Question	Part	Marking guidance	Total marks
02	1	<p>The data is generated/received/must be processed/responded to at high velocity/<u>very</u> quickly;</p> <p>NE. “velocity” on its own.</p> <p>NE. High velocity of data</p> <p>NE. Speed data transmitted/sent at</p> <p>A. “changed”, “modified” or similar instead of “processed” but NE. accessed</p> <p>A. An example of what very quickly would be eg milliseconds, but not a long time period eg seconds</p> <p>A. Instantly/immediately for very quickly as BOD</p>	<p>1</p> <p>AO1 = 1</p>

Question	Part	Marking guidance	Total marks
02	2	<p>1 mark for representing "The Bath store sells chocolate biscuits" with a <u>solid line</u> joining the store and product labelled "Sells".</p> <p>A. Alternative labels which clearly have the same meaning eg "Stocks"</p> <p>A. Use of directed arrow</p> <p>1 mark for representing "There are 20 individual biscuits in a packet of iced biscuits and each packet costs £1.50" by drawing <u>rectangular boxes</u> containing this data, connected to the Iced Biscuits with <u>dashed lines</u>.</p> <p>R. Both pieces of data in in one box</p>	<p>3</p> <p>AO2 = 3</p>

1 mark for representing "Both chocolate biscuits and iced biscuits are made by the company Delicious Snacks. The company has 75 employees and also makes cake bars."

- adding an oval for the company Delicious Snacks
- connecting a rectangle to the company oval by dashed lines indicating the number of employees
- adding an oval for the new product Cake Bar
- linking the oval for the company to all three products using solid lines and giving these an appropriate label eg "makes".

A. Alternative labels which clearly have the same meaning eg "Manufactures"

A. Use of directed arrows

I. Incorrect spelling as long as meaning is clear.

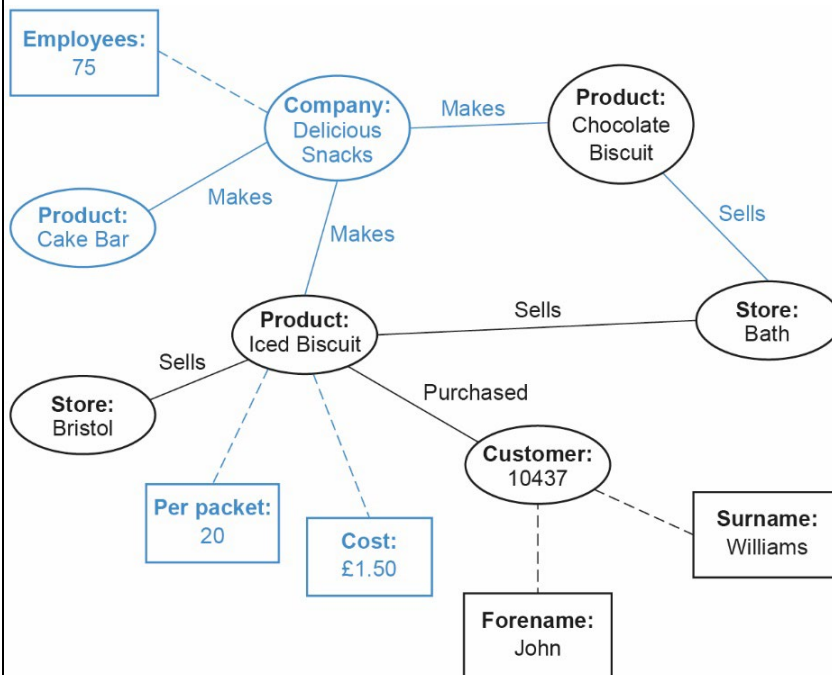

DPT. Use of incorrect line styles (solid/dashed)

DPT. Wrong shapes used for rectangles and ovals

DPT. Missing labels on lines

DPT. Labels on dashed lines

An example fully correct diagram is shown below:

Question	Part	Marking guidance	Total marks			
03	1	<p>Award 1 mark for each pair of measure and how it is effective.</p> <p>Do not award marks for both rows 1 and 2.</p>	<p>2</p> <p>AO1 = 2</p>			
		<table border="1"> <thead> <tr> <th data-bbox="384 510 432 539"></th> <th data-bbox="432 510 836 539">Measure</th> <th data-bbox="836 510 1294 539">How Makes Effective</th> </tr> </thead> </table>			Measure	How Makes Effective

Question	Part	Marking guidance	Total marks
07	2	<p>(After a 0 has been read,) the rules <u>keep moving</u> the read/write head to the <u>right</u> (preserving the contents of the tape); <u>Until</u> a blank symbol is encountered / the end of the number is reached, then the state is changed to S_{C0} (and the head is moved left/direction reversed); Note: To achieve the first mark, it must be clear that the head moves right regardless of whether a 0 or 1 is read and also that this is a repeated process ie not just moving one place right. Note: If it is stated that the process of moving continues until the end of the number is reached, then it can be inferred that the head was moving right for the first mark, if this was not explicitly stated. Note: Marks should not be awarded for just explaining what the rules do individually.</p>	<p>2 AO2 = 2</p>

Question	Part	Marking guidance	Total marks
07	3	<p>It reads instructions one at a time // reads instructions in sequence // deals with instructions line by line; And executes these instructions; Instructions are / transition function is stored on the tape; A. "rules" for "instructions"</p> <p>Max 2</p>	<p>2 AO1 = 2</p>

Question	Part	Marking guidance	Total marks
08		<p>Purpose (1 mark):</p> <p>To automate the configuration of hosts connecting to a (TCP/IP) network // to allocate IP addresses/subnet mask/default gateway to hosts; A. "computer" or suitable alternative term for "host"</p> <p>Why used (1 mark):</p> <p>Reduces the need for expert knowledge when configuring a host // reduces the time required to configure hosts // facilitates efficient use of a limited pool of IP addresses // avoids errors with a relevant example such as duplicating IP addresses or programming incorrect subnet mask; A. enables reuse of IP addresses NE. "avoiding errors" without an example</p> <p>Contents of communication (max 2 marks):</p> <p>1. Host sends request to discover a (DHCP) server; A. host sends request for configuration</p>	<p>4 AO1 = 4</p>

		<p>2. (DHCP) server(s) offer configuration to host; NE. server gives IP address to host</p> <p>3. Host accepts offer of configuration from (a DHCP) server (by echoing the accepted configuration back to the server);</p> <p>4. (DHCP) server confirms that configuration has been allocated to host;</p> <p>A. “IP Address” for “configuration” but N.E. “subnet mask”, “default gateway” for this mark point</p> <p>Award one mark for any one correct point OR two marks for any two correct points, made in the correct order.</p>

Question	Part	Marking guidance	Total marks
09	1	<p>CarRegNo and JobDate;</p> <p>A. Just both these attribute names written with no further explanation</p> <p>R. “CarRegNo or JobDate”</p>	<p>1</p> <p>AO2 = 1</p>

Question	Part	Marking guidance	Total marks
09	2	<p>AO2 – 1 mark:</p> <p>A person may own more than one car // a person may bring different cars to the garage;</p> <p>It might be desired to store details of an owner when the car they own is not yet known;</p> <p>A. A car might be owned by more than one person (at different times)</p> <p>A. Easier to transfer car from one owner to another</p> <p>AO1 – 1 mark:</p> <p>Avoid storing owner details once for each car they own / multiple times;</p> <p>Avoid having to input owner details once for each car they own;</p> <p>To transfer car between owners would only have to change one attribute in the car relation;</p> <p>Minimise data duplication // no unnecessary repeated data; A. reduce for minimise</p> <p>Eliminate data redundancy; A. Reduce/minimise for eliminate</p> <p>Eliminate data inconsistency // improve consistency // avoid inconsistency problems;</p> <p>Eliminate update anomalies; A. Example in context</p> <p>Eliminate insertion anomalies; A. Example in context</p> <p>NE. Fewer errors when updating/inserting/deleting without concrete example or good explanation</p> <p>NE. Saving space/memory</p> <p>NE. Easier to query</p>	<p>2</p> <p>AO1 = 1</p> <p>AO2 = 1</p>

Question	Part	Marking guidance	Total marks
09	3	<p>1 mark for any one correctly drawn relationship OR 2 marks for three relationships drawn correctly</p> <p>Max 1 if more than three relationships drawn and any are incorrect</p>	<p>2</p> <p>AO2 = 2</p>

Question	Part	Marking guidance	Total marks
09	4	<p>1 mark: Correct UPDATE clause 1 mark: Correct SET clause 1 mark: Correct WHERE clause</p> <p>Max 2 if SQL not fully working</p> <p>A. Any type of quotation marks or hashes for delimiters for JobDuration or no delimiters A. The value 206 if it is delimited by any type of quotation mark A. Any sensible format for the time data eg "01.30", "1:30", "1:30.00" etc. A. Time given as a decimal ie 1.5 A. Table name given before fieldname I. Quotation marks around fieldnames I. Any attempt to also change value of InGarage</p> <p><u>Example Solution</u></p> <pre>UPDATE Job SET JobDuration = "01:30" WHERE JobID = 206</pre>	<p>3</p> <p>AO3 = 3</p>

Question	Part	Marking guidance	Total marks
09	5	<p>1 mark: Correct INSERT INTO clause 1 mark: Correct VALUES clause</p> <p>Max 1 if SQL not fully working</p>	<p>2</p> <p>AO3 = 2</p>

		<p>A. List of fields in any order for method 2, but to get the VALUES mark in method 2, order of fields list in INSERT INTO must match order of values in VALUES</p> <p>A. The value(s) 206 and 12 if they are delimited by any type of quotation mark</p> <p><u>Example Solutions</u></p> <p>Method 1:</p> <pre>INSERT INTO PartUsedForJob VALUES (206, 12, 2)</pre> <p>Method 2:</p> <pre>INSERT INTO PartUsedForJob (JobID, PartID, QuantityUsed) VALUES (206, 12, 2)</pre>

Question	Part	Marking guidance	Total marks
09	7	<p>1 mark:</p> <p>Create a new relation to identify which make/model(s) of car each part can be fitted to; A. Use of a relation name given that clearly identifies the purpose eg PartToFitMakeModel instead of an explanation A. If it is just stated that a new relation is created if the attributes in the relation make its purpose clear NE. A relation to link the Part and Car relations</p> <p>2 marks from:</p> <p>Store the attributes PartID, Make and Model in the new relation; I. Inclusion of additional attributes Make the PartID, Make and Model / all the attributes the entity identifier; A. The creation of a new field as an entity identifier for this relation if it is explained that a constraint would also need to be added to ensure that it is not possible to record twice in the relation that a particular part could be fitted to a particular make and model of car</p> <p>Accept answers by example, such as: PartToFitMakeModel (<u>PartID</u>, Make, Model)</p> <p><u>Alternative Response</u></p> <p>1 mark:</p> <p>Create two new relations, one to associate an entity identifier with each make and model of car (eg <u>MakeModelID</u>) and one to link the parts to this new relation. A. If it is just stated that new relations will be created if the attributes in the relations make its purpose clear</p>	<p>3 AO2 = 3</p>

		<p>2 marks from:</p> <p>Store the attributes <code>Make</code> and <code>Model</code> with a new entity identifier (eg <code>MakeModelID</code>) in one of the new relations; Store the <code>PartID</code> in the other new relation together with the entity identifier from the first new relation (eg <code>MakeModelID</code>); Make the <code>PartID</code> and <code>MakeModelID</code> the entity identified in the second new relation; A. The creation of a new field as an entity identifier for this relation if it is explained that a constraint would also need to be added to ensure that it is not possible to record twice in the relation that a particular part could be fitted to a particular make and model of car</p> <p>Accept answers by example, such as: <code>UniqueMakeModel (MakeModelID, Make, Model)</code> and <code>PartToFitMakeModel (PartID, MakeModelID)</code></p> <p>A. Table or entity for relation. A. Field for attribute. A. Primary key for Entity Identifier.</p>
