CS02

Unit 2 Concepts and principles of computer science

Mark scheme

Specimen

Version: 1.0 Final

Mark schemes are prepared by the Lead Assessment Writer and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation events which all associates participate in and is the scheme which was used by them in this examination. The standardisation process ensures that the mark scheme covers the students' responses to questions and that every associate understands and applies it in the same correct way. As preparation for standardisation each associate analyses a number of students' scripts. Alternative answers not already covered by the mark scheme are discussed and legislated for. If, after the standardisation process, associates encounter unusual answers which have not been raised they are required to refer these to the Lead Examiner.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of students' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Further copies of this mark scheme are available from oxfordaqaexams.org.uk

Copyright information

OxfordAQA retains the copyright on all its publications. However, registered schools/colleges for OxfordAQA are permitted to copy material from this booklet for their own internal use, with the following important exception: OxfordAQA cannot give permission to schools/colleges to photocopy any material that is acknowledged to a third party even for internal use within the centre.

How to mark

Aims

When you are marking your allocation of scripts your main aims should be to:

- recognise and identify the achievements of students
- where relevant, place students in the appropriate mark band and in the appropriate part of that mark band (high, low, middle) for **each** assessment objective
- record your judgements with brief notes, annotations and comments that are relevant to the mark scheme and make it clear to other associates how you have arrived at the numerical mark awarded for each assessment objective
- ensure comparability of assessment for all students, regardless of question or examiner.

Approach

It is important to be **open minded** and **positive** when marking scripts.

The specification recognises the variety of experiences and knowledge that students will have. It encourages them to study computer science in a way that is relevant to them. The questions have been designed to give them opportunities to discuss what they have found out about computer science. It is important to assess the quality of **what the student offers**.

Do not mark scripts based on the answer **you** would have written. The mark schemes have been composed to assess **quality of response** and not to identify expected items of knowledge.

Assessment Objectives

This component requires students to:

AO1: Demonstrate knowledge and understand of the key concepts and principles of computer science.

AO2: Apply knowledge and understanding of key concepts and principles of computer science.

AO3: Analyse problems in computational terms in order to develop and test programmed solutions and demonstrate an understanding of programming concepts.

The following annotation is used in the mark scheme.

; means a single mark

// means alternative response

/ means an alternative word or sub-phrase

A means acceptable creditworthy answer

R means reject answer as not creditworthy

NE means not enough

I means ignore

DPT in some questions a specific error made by a student, if repeated, could result in the student failing to achieve multiple marks. The **DPT** label indicates that this mistake should result in a student not achieving only one mark, on the first occasion that the error is made.

Provided that the answer remains understandable, subsequent marks should be awarded as if the error was not being repeated

| Question | Part | Marking guidance | Total marks |
|----------|------|--|--------------|
| 01 | 1 | E XOR; R. if more than one lozenge shaded | 1 A01 = 1 |

| Question | Part | Marking guidance | Total marks |
|----------|------|---|--------------|
| 01 | 2 | The key must be (at least) as long as the data to be encrypted; The key must not be reused; The key must be (truly) random; The key must be kept securely/not revealed; Max 2 | 2 A01 = 2 |

| Question | Part | Marking guidance | Total marks |
|----------|------|--|--------------|
| 01 | 3 | Symmetric: The same key is used to encrypt and decrypt; A. Sender and receiver use same key. Asymmetric: Different (but related) keys are for encryption and decryption; A. Sender and receiver use different keys. NE. Symmetric uses one key // asymmetric uses two keys. Max 1 | 1 A01 = 1 |

| Question | Part | Marking guidance | Total marks | | | | | | |
|----------|---|---|-------------|-------------|-------|---|---|---|--------------|
| 02 | 1 | <table border="1"> <thead> <tr> <th>Level</th> <th>Description</th> <th>Marks</th> </tr> </thead> <tbody> <tr> <td>4</td> <td>Description covers all, or almost all, of the points in the indicative guidance and fully reflects the sequence in which steps occur. It includes use of registers, buses and main memory. An excellent level of understanding is shown with no misconceptions.</td> <td>4</td> </tr> </tbody> </table> | Level | Description | Marks | 4 | Description covers all, or almost all, of the points in the indicative guidance and fully reflects the sequence in which steps occur. It includes use of registers, buses and main memory. An excellent level of understanding is shown with no misconceptions. | 4 | 4 A01 = 4 |
| | | Level | Description | Marks | | | | | |
| 4 | Description covers all, or almost all, of the points in the indicative guidance and fully reflects the sequence in which steps occur. It includes use of registers, buses and main memory. An excellent level of understanding is shown with no misconceptions. | 4 | | | | | | | |

| | | | | | |
|--|--|---|---|---|--|
| | | 3 | Description covers most (ie more than half) of the points in the indicative guidance and completely or almost completely reflects the correct sequence in which steps occur. At least two of the use of registers, buses and main memory are covered. A good level of understanding is shown. Whilst there may be some omissions, there is at most one misconception in the response. | 3 | |
| | | 2 | At least two correct points are made from the indicative guidance and there is some indication of understanding of the correct sequence. Some understanding is shown. | 2 | |
| | | 1 | At least one relevant point has been made. There is not sufficient evidence to conclude that the cycle has been understood. | 1 | |
| | | | The response does not meet the standard required for Level 1. | 0 | |
| <p><u>Guidance – Indicative Response</u></p> <ul style="list-style-type: none"> • Contents of Program Counter/PC transferred to Memory Address Register/MAR. • Address bus used to transfer this address to main memory. • Memory read signal sent to main memory using control bus. • Fetched value/instruction transferred using the data bus. • Contents of addressed memory location loaded into the Memory Buffer Register/MBR. • Transfer content of Memory Buffer Register/MBR to the Current Instruction Register/CIR. <p>A. Memory Data Register/MDR for MBR I. Incrementing of program counter, even if incorrect NE. Points made using register transfer notation only eg CIR ← [MBR]</p> | | | | | |

| Question | Part | Marking guidance | Total marks |
|----------|------|---|--------------------------------|
| 02 | 2 | <p><u>Instruction and data</u> can be accessed simultaneously;</p> <p>Avoid/reduce bottleneck of single data/address bus(es) // avoid/reduce delays waiting for memory fetches;</p> <p>Avoids possibility of data being executed as code (which is one method that can be exploited by hackers); Being able to use exclusively ROM for instruction memory prevents the program being modified/hacked; A. program cannot be accidentally overwritten (by data);</p> <p>Instruction and data memory can have different word lengths;</p> <p>Different technologies can be used to implement instruction and data memory;</p> <p>Different quantities of instruction and data memory means that address lengths can differ between the two // memory address structures can differ;</p> <p>Max 2</p> <p>NE. So programs/tasks will run faster NE. More efficient</p> | <p>2</p> <p>AO1 = 2</p> |

| Question | Part | Marking guidance | Total marks |
|----------|------|--|--------------------------------|
| 03 | 1 | <p>Award 3 marks for correct answer: 16.48</p> <p>A. responses written correctly to more decimal places (16.4794921875) or as a fraction 16 491/1024</p> <p>A. $48000 \times 16 \times 3 \times 60 / 8 / 1024 / 1024$</p> <p>Award 2 marks for an answer written to 0 or 1 decimal places (16 or 16.5) or if truncated to 16.47</p> <p>If answer is incorrect then award up to 2 method marks. Award 1 method mark for every two steps completed from this list:</p> <ul style="list-style-type: none"> • multiplying by 48000 • multiplying by 16 • multiplying by 3 • multiplying by 60 • dividing by 8 • dividing by 1024 / 2^{10} • dividing by 1024 / 2^{10} a second time | <p>3</p> <p>AO2 = 3</p> |

| | | | |
|--|--|--|--|
| | | <p>The following method points are equivalent to performing two of the method points in the list above:</p> <ul style="list-style-type: none"> • multiplying by 180 • dividing by 2 • dividing by $1048576 / 2^{20}$ <p>Max 2 if answer is not correct and written to at least 2 decimal places</p> | |
|--|--|--|--|

| Question | Part | Marking guidance | Total marks |
|----------|------|---|--------------------------------|
| 03 | 2 | <p>Award 1 mark for correct answer: 30000</p> <p>A. 15000×2, double 15000</p> | <p>1</p> <p>AO2 = 1</p> |

| Question | Part | Marking guidance | Total marks |
|----------|------|---|--------------------------------|
| 03 | 3 | <p>Digital to Analogue Converter</p> <p>A. DAC</p> <p>NE. Digital to Analogue</p> | <p>1</p> <p>AO1 = 1</p> |

| Question | Part | Marking guidance | Total marks |
|----------|------|--|--------------------------------|
| 04 | 1 | <p>1 mark: Introduced to support a larger range of characters</p> <p>1 mark for any point from the list below:</p> <ul style="list-style-type: none"> • Increased international communication. • Use of files in multiple countries. • Requirement to use additional symbols (allow examples, eg mathematical / scientific / engineering / emoji symbols). • Facilitates interchange of documents between countries. • Culturally unacceptable to only allow non-English speaking countries to communicate in English // (concurrent) support for multiple languages. <p>Max 2</p> | <p>2</p> <p>AO1 = 2</p> |

| Question | Part | Marking guidance | Total marks |
|----------|------|--|--------------------------------|
| 04 | 2 | <p>Alternative 1</p> <p>The number of 1s is counted // the (1) bits are summed;</p> <p>if the count/sum/total is even, the parity bit is set to 0, otherwise it is set to 1 // if the count//sum/total is odd, the parity bit is set to 1, otherwise it is set to 0 // the parity bit is set to a value which ensures the total number of 1s is even;</p> <p>Alternative 2</p> <p>The bits are XOR'd with each other;</p> <p>and the result is the parity bit;</p> <p>Max 2</p> | <p>2</p> <p>AO1 = 2</p> |

| Question | Part | Marking guidance | Total marks |
|----------|------|------------------|--------------------------------|
| 04 | 3 | 0; | <p>1</p> <p>AO2 = 1</p> |

| Question | Part | Marking guidance | Total marks |
|----------|------|--|--------------------------------|
| 04 | 4 | <p>Errors that change an even number of bits (A. two bits) cannot be detected;</p> <p>R. multi-bit errors cannot be identified</p> <p>(Errors can be detected but) errors cannot be corrected;</p> <p>A. Position of errors cannot be identified</p> <p>Max 1</p> | <p>1</p> <p>AO1 = 1</p> |

| Question | Part | Marking guidance | Total marks |
|----------|------|--|--------------------------------|
| 05 | 1 | <p>Software used in the management of a computer system // layer(s) of software that abstract the user from how the computer works // software that provides a platform for other software to use;</p> <p>A. software used to run the computer A. software that provides a virtual machine NE. software that maintains a computer</p> | <p>1</p> <p>AO1 = 1</p> |

| Question | Part | Marking guidance | Total marks |
|----------|------|--|--------------------------------|
| 05 | 2 | <p>B Bitmap image editors;</p> <p>R. if more than one lozenge shaded</p> | <p>1</p> <p>AO1 = 1</p> |

| Question | Part | Marking guidance | Total marks |
|----------|------|---|--------------------------------|
| 05 | 3 | <p>To allocate processors/cores to processes // schedule processes // decide which process to carry out when // manage the execution of multiple processes; NE. processor management</p> <p>To allocate memory/RAM to processes // to determine what areas of memory are used for what purpose // moving data into and out of RAM / to a paging file for virtual memory // ensuring processes can only write to memory that they have been allocated; NE. memory management</p> <p>To allocate I/O devices to processes // manages communication between processes and I/O devices // automatic installation of drivers for new I/O devices; A. examples of devices (but no more than one mark) NE. manages I/O devices</p> <p>To hide the complexities of the hardware from the user; NE. virtual machine without description R. user interface</p> <p>To handle interrupts // to call appropriate interrupt handler (A. ISR) when an interrupt occurs;</p> <p>To allocate space on a storage device to files // organising files into directories // determines where on a device to save a file // recognising storage devices when they are connected;</p> | <p>2</p> <p>AO1 = 2</p> |

| | | | |
|--|--|--|--|
| | | <p>A. defragmentation of disks NE. saving a file</p> <p>Installation of new software // automatic / managing updating of software; A. “programs” or “tasks” for “processes”</p> <p>Manage power consumption / use of battery; A. examples of this eg controlling clock speed, brightness of screen</p> <p>Note: Students must describe – phrases such as “processor management”, “allocating memory” etc are not enough.</p> <p>Max 2</p> | |
|--|--|--|--|

| Question | Part | Marking guidance | Total marks |
|----------|------|--|---------------------------------------|
| 06 | 1 | <p>Award 3 marks if correct final answer is shown: 16 // 2⁴</p> <p>If final answer is not given then award 3 marks if correct calculation is shown:</p> $2^{\left(\frac{400 \times 1000 \times 8}{1000 \times 800}\right)}$ <p>If final answer is not correct or overall calculation is not clear then award up to 2 marks for working, one for each of the points listed below:</p> <ul style="list-style-type: none"> • multiplying 400 by 1000 // 400 000 shown in working; • dividing 3 200 000 or 400 000 or 8000 or 3200 or 400 or 8 by a number; • multiplying 1000 by 800 // 800 000 shown in working; • multiplying by 8 to convert from bytes to bits; • colour depth calculated as 4; • showing 2^x as the last stage of the working, where x is the value calculated so far; | <p>3</p> <p>AO2 = 3</p> |

| Question | Part | Marking guidance | Total marks |
|----------|------|--|--------------------------------|
| 06 | 2 | <p>Bitmap images store the colour of each pixel // vector graphics do not need to store the colour of each pixel;</p> <p>A. data about pixel instead of colour, but R. just storing pixels</p> <p>The image contains 800 000 pixels // images can contain lots of pixels;</p> <p>Vector graphics store information about / properties of the objects that an image is composed of;</p> <p>A. “shapes” for “object” R. “equations” for “object” R. “instructions” for “object” unless clear that instructions are descriptions of objects A. examples of properties/information instead of the actual words, if there are at least two valid examples NE. vector graphics are composed of objects without reference to properties/information</p> <p>It takes only a small amount of memory to store the properties of an object;</p> <p>(Large) images can be composed of relatively few objects // there will be fewer objects than there would be pixels // a single object might be equivalent to many pixels;</p> <p>Max 3</p> | <p>3</p> <p>AO1 = 3</p> |

| Question | Part | Marking guidance | Total marks |
|----------|------|--|--------------------------------|
| 06 | 3 | <p>Individual objects / components / parts of the image can be manipulated / edited / duplicated / copied independently; NE. images are easy to edit</p> <p>The image / individual objects / components / parts of the image can be enlarged / scaled without loss of quality / without becoming pixelated // vector graphics are resolution independent; A. zoomed in” for enlarged NE. easy to scale</p> <p>If an object / component is deleted, the software knows what is behind it // no “hole” is left in the image;</p> | <p>2</p> <p>AO1 = 2</p> |

| | | | |
|--|--|---|--|
| | | R. faster transmission times (as a direct consequence of fewer bytes, given in question) | |
| | | Max 2 | |

| Question | Part | Marking guidance | Total marks |
|----------|------|--|--------------------------------|
| 07 | | <p>What cache memory is (Max 1):</p> <p>* Memory that can be accessed very quickly; Memory located on (A. close to) the processor;</p> <p>What cache memory is used for:</p> <p>To store most frequently used // most recently used // pre-fetched instructions/data // to store instructions in the locality of the instruction currently being executed;</p> <p>How more cache memory improves performance (Max 2):</p> <p>More instructions/data can be stored in the cache; #Instructions/data stored in cache can be accessed more quickly <u>than instructions/data in main memory</u> // if an instruction is accessed <u>a second time</u>, it can be retrieved more quickly; This increases the probability that a particular data item/instruction is in the cache when fetched // this increases the probability of a cache hit // fewer fetches from main memory will be required;</p> <p>Note: Only award the point marked # if the point marked * has not already been awarded.</p> | <p>4</p> <p>AO1 = 4</p> |

| Question | Part | Marking guidance | Total marks |
|----------|------|---|--------------------------------|
| 08 | 1 | <p>1 mark: Output C is correct for all inputs</p> <p>1 mark: Output D is correct for all inputs</p> <p>1 mark: Circuit is fully correct and uses exactly two gates</p> | <p>3</p> <p>AO2 = 3</p> |

Example circuits

3 mark solution:

2 mark solution:

2 mark solution:

| Question | Part | Marking guidance | Total marks |
|----------|------|--|--------------|
| 08 | 2 | It adds two bits (A. numbers) together // it is a half adder; A. it is an adder as BOD, it performs addition R. it is a full adder | 1 AO2 = 1 |

| Question | Part | Marking guidance | Total marks |
|----------|------|--|--------------|
| 08 | 3 | <p>Marking guidance for examiners</p> <ul style="list-style-type: none"> • Award marks for working out until an incorrect step has been made. • Ignore missing steps from the example solutions, as long as the jumps between steps are logically correct. • If, in any one step, a candidate is simplifying different parts of an expression simultaneously and makes an error, award marks for the correctly simplified part(s) and then stop marking. <p>1 mark for final answer: A</p> <p>3 marks for working. Award up to three marks for applying each one of the three techniques (one mark per application, multiple marks can be awarded for using the same technique more than once):</p> <ul style="list-style-type: none"> • a successful application of De Morgan’s Law (and any associated cancellation of NOTs) that produces a simpler expression – award 2 marks if De Morgan’s Law applied twice simultaneously • applying an identity other than cancelling NOTs that produces a simpler expression • successfully expanding brackets // factorising. <p>Note: A simpler expression is one that is logically equivalent to the original expression but uses fewer logical operators.</p> <p>Max 2 for working if there is no successful application of De Morgan.</p> <p>Max 3 overall if any incorrect working</p> | 4 AO2 = 4 |

| | | | |
|--|--|--|--|
| | | <p>Example solution 1</p> $A \cdot \bar{B} + B \cdot \overline{(\bar{A} + (\bar{B} \cdot C))}$ $A \cdot \bar{B} + B \cdot A \cdot \bar{B} \cdot \bar{C}$ $A \cdot (\bar{B} + B \cdot \bar{B} \cdot \bar{C})$ $A \cdot (\bar{B} + B \cdot (B + \bar{C}))$ $A \cdot (\bar{B} + B \cdot B + B \cdot \bar{C})$ $A \cdot (\bar{B} + B + B \cdot \bar{C})$ $A \cdot (1 + B \cdot \bar{C})$ $A \cdot 1$ A | |
| | | <p>Application of De Morgan Factorising Application of De Morgan Expand brackets By $X \cdot X = X$ By $X + \bar{X} = 1$ By $X + 1 = 1$ By $X \cdot 1 = X$</p> | |
| | | <p>Example solution 2</p> $A \cdot \bar{B} + B \cdot \overline{(\bar{A} + (\bar{B} \cdot C))}$ $A \cdot \bar{B} + B \cdot \overline{(\bar{A} + (B + \bar{C}))}$ $A \cdot \bar{B} + B \cdot A \cdot (B + \bar{C})$ $A \cdot \bar{B} + B \cdot A \cdot B + B \cdot A \cdot \bar{C}$ $A \cdot \bar{B} + A \cdot B + B \cdot A \cdot \bar{C}$ $A \cdot (\bar{B} + B) + B \cdot A \cdot \bar{C}$ $A \cdot 1 + B \cdot A \cdot \bar{C}$ $A + B \cdot A \cdot \bar{C}$ A | |
| | | <p>Application of De Morgan Application of De Morgan Expand brackets By $X \cdot X = X$ Factorising partially By $X + \bar{X} = 1$ By $X \cdot 1 = X$ By $X + (X \cdot Y) = X$</p> | |
| | | <p>Example solution 3</p> $A \cdot \bar{B} + B \cdot \overline{(\bar{A} + (\bar{B} \cdot C))}$ $A \cdot \bar{B} + B \cdot \overline{(\bar{A} + (B + \bar{C}))}$ $A \cdot \bar{B} + B \cdot A \cdot (B + \bar{C})$ $A \cdot (\bar{B} + B \cdot (B + \bar{C}))$ $A \cdot (\bar{B} + B \cdot B + B \cdot \bar{C})$ $A \cdot (\bar{B} + B + B \cdot \bar{C})$ $A \cdot (1 + B \cdot \bar{C})$ $A \cdot 1$ A | |

| Question | Part | Marking guidance | Total marks |
|----------|------|---|--------------------------------|
| 09 | 1 | <p>Advantages of high-level language (MAX 2):</p> <p>Program code is easier to understand/maintain/debug; Faster development time // programmers can be more productive // one line of HLL code can do the same job as many lines of assembly language; Programs are (more) portable (to other hardware platforms). Availability of flow control structures; A. Example(s) eg loops, selection Improved features for supporting modularity; A. Ability to use subroutines Built-in support for data structures; A. Example(s) eg arrays, records Language is problem-oriented; Support for different paradigms; A. Examples eg functional programming</p> <p>Disadvantages of high-level language (MAX 2):</p> <p>Assembly language code may execute more quickly; R. If response suggests that faster execution is because translation is not required Assembly language code may use less memory; Assembly language gives direct/better access to computer hardware // Enables direct manipulation of memory (contents); Reliance on the correctness of the compiler/interpreter; NE. "More efficient" for either executes more quickly or uses less memory</p> <p>Award marks for disadvantages as opposite of advantage points eg a disadvantage of assembly language could be "Program code is harder to understand/maintain". BUT do not award two marks for an advantage and its corresponding disadvantage.</p> | <p>4</p> <p>AO1 = 4</p> |

| Question | Part | Marking guidance | Total marks |
|----------|------|--|--------------------------------|
| 09 | 2 | <p>Software must be used to finish the translation process (on the computer running the program);</p> <p>The (JIT compiler) compiles the intermediate language code / bytecode into machine code for the processor / platform / computer it is being executed on;</p> <p>Use a virtual machine // a just-in-time / JIT compiler;</p> <p>(The virtual machine will) interpret / translate / execute the intermediate language code / bytecode // call functions within its own code to carry out the command;</p> <p>Each processor instruction set / architecture will have its own virtual machine;</p> <p>Max 2</p> | <p>2</p> <p>AO1 = 2</p> |

| Question | Part | Marking guidance | Total marks |
|----------|------|--|--------------------------------|
| 09 | 3 | <p>Allows processor / platform independence // code is more portable / cross-platform;</p> <p>Compiler is only required to translate source code once (but the intermediate language / bytecode can still be executed on a variety of platforms);</p> <p>Can create intermediate language code / bytecode for a specific (standardised) virtual machine that all the target machines have installed;</p> <p>The virtual machine can perform security checks on the (intermediate language / byte) code without execution, hence it is more secure;</p> <p>Max 1</p> | <p>1</p> <p>AO1 = 1</p> |

| Question | Part | Marking guidance | Total marks |
|----------|------|------------------|--------------------------------|
| 10 | 1 | C; | <p>1</p> <p>AO2 = 1</p> |

|----------|------|---|-------------|---|---|---|---|---|---|---|---|---|---|---|---|--------------|
| 10 | 4 | <p>Answer:</p> <div style="text-align: center; margin-bottom: 10px;"> <table border="1" style="border-collapse: collapse;"> <tr> <td style="padding: 2px 5px;">0</td> <td style="padding: 2px 5px;">●</td> <td style="padding: 2px 5px;">1</td> <td style="padding: 2px 5px;">1</td> <td style="padding: 2px 5px;">1</td> <td style="padding: 2px 5px;">0</td> <td style="padding: 2px 5px;">1</td> <td style="padding: 2px 5px;">0</td> <td style="padding: 2px 5px;">1</td> </tr> </table> <p>Mantissa</p> </div> <div style="text-align: center;"> <table border="1" style="border-collapse: collapse;"> <tr> <td style="padding: 2px 5px;">0</td> <td style="padding: 2px 5px;">1</td> <td style="padding: 2px 5px;">1</td> <td style="padding: 2px 5px;">0</td> </tr> </table> <p>Exponent</p> </div> <p>If answer is correct award 3 marks.</p> <p>If answer is incorrect award up to 2 method marks:</p> <ul style="list-style-type: none"> • Correct representation of 58.5 in fixed point binary: 111010.1; A. leading 0s. | 0 | ● | 1 | 1 | 1 | 0 | 1 | 0 | 1 | 0 | 1 | 1 | 0 | 3 AO2 = 3 |
| 0 | ● | 1 | 1 | 1 | 0 | 1 | 0 | 1 | | | | | | | | |
| 0 | 1 | 1 | 0 | | | | | | | | | | | | | |

| | | | |
|--|--|---|--|
| | | <ul style="list-style-type: none"> Showing the correct value of the exponent in denary (6) or binary (110) // showing the binary point being shifted 6 places; <p>MAX 2</p> | |
|--|--|---|--|

| Question | Part | Marking guidance | Total marks |
|----------|------|---|--------------|
| 10 | 5 | 0.05 // 13.8 – 13.75; R. -0.05 A. Award BOD mark if correct method has been shown ie 13.8 – 13.75 but candidate has then made an error performing the subtraction operation | 1 AO2 = 1 |

| Question | Part | Marking guidance | Total marks |
|----------|------|--|--------------|
| 10 | 6 | 0.36%; A. 0.0036 // $0.05 \div 13.8$ A. Follow-through of incorrect answer to question part 11.5 A. Award BOD mark if correct method has been shown but candidate has then made an error performing the division operation. | 1 AO2 = 1 |

| Question | Part | Marking guidance | Total marks |
|----------|------|---|--------------|
| 11 | 1 | To store data / programs whilst the computer is turned off; A. long-term / permanent storage NE. secondary storage devices are non-volatile NE. store data that is not in use (As) the contents of RAM are lost when the computer is turned off; R. “main memory” for “RAM” A. main memory (RAM) To transfer data / programs between computers; NE. secondary storage devices are portable Allows the storage of data sets / files that could not fit in RAM // computer architecture supports a limited amount of main memory/RAM; A. primary store for main memory NE. to extend storage capacity, to store more, to store large files, higher capacity A. To use as virtual memory Max 2 | 2 AO1 = 2 |
